### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Belaschk et al (U.S. patent 2,140,307).

The patent to Belaschk discloses the invention as is claimed. Note figures 1 and 11. In figure 1, note the head (17) which mounts two bristle supports (30,31), each support is rotatable about an axis and has bristles (32,33, respectively) thereon which extend at a slight angle from a surface of their respective supports.

With respect to claim 2, note that the supports are “rotatable” in any manner so desired. Nothing would prevent such.

With respect to claim 3, note that the bristles, while being angled, are considered to be “substantially” perpendicular to their respective supports. Use of the term “substantially” allows for some deviation from perpendicular.

With respect to claims 4 and 5, note figure 1 wherein it can be seen that at least some of the second bristles are angled towards the first bristles and some of the second bristles are angled away from the first bristles.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Ruse (U.S. patent 1,911,973).

The patent to Ruse discloses the invention as is claimed. Note figure 2, wherein it can be seen a first support (7) with bristles (20) thereon and a second support (17) with bristles (20) thereon. The bristles on the second support are at an angle with respect to a surface of the second support from which they extend.

With respect to claim 1 and the head being "for an electric toothbrush", such does not define any particular structure for the head. At least none not shown or suggested by Ruse.

With respect to claim 2, note that the supports of Ruse can be rotated in an oscillating manner.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
